Skills & Experience

Freelance Artist

2006-Present

Clients are provided with a variety of services, such as character illustration, logo design and business card layout. Strong communication skills in addition to fundamental art and design skills are key. After thorough consultation to determine the needs of a project I present the clients with multiple ideas and provide guidance to them throughout the duration of the project. By eliciting feedback I encourage clients to take an active role in the creation process which ensures their satisfaction with the end result.

Office Administrator

This position requires strong interpersonal skills and organization. I am the primary point of contact between agents, corporate staff and clients. It is my responsibility to ensure smooth daily operations by providing prompt customer service, maintaining electronic and physical file systems, assisting agents, managing part time staff, and reporting all transactions to the corporate office. I played a major role in the office's recent relocation by coordinating the move of equipment and files, and keeping daily operations active during the move itself.

Instructor

Students practiced a variety of studio art subjects such as, cartooning, drawing and portraiture. As an instructor, proficiency in each subject and the ability to convey their principles was imperative. Each class emphasized the importance of foundational skills such as basic shape, form and composition. Every lesson plan I prepared was tailored to match the students' age and ability level. Students were taught training techniques to practice outside of class. Each student finished the courses with one or more completed pieces.
